

TASK

+ TASKVIPER® 4D 4-DIRECTIONAL REACH STACKER

4-DIRECTIONAL CONTROL.

The TASK® VIPER® 4D is designed with four-directional travel manoeuvrability, allowing operators to be smarter, more efficient and cause less damage to goods when handling larger loads.

The VIPER® 4D's revolving load wheels add a lateral axis of direction to the standard forward and reverse movement. This allows operators to travel sideways down narrower aisles with the same wide loads.

Built as standard with a tilting carriage, side-shift and pantographic reach, as well as the distinctive 4-directional travel system; all the functions including lift and lower are controlled using Task's VTC (Variable Total Control) module. This provides users with absolute control when operating the VIPER®.

HANDLE MORE.

The VIPER® 4D reach truck eliminates the need for right-angle stacking; reducing the aisle widths required for handling large, heavy loads.

Whether you are handling long steel beams, large tubing, timber lengths or any other large materials, the VIPER® 4D's unique 4-directional mechanism enables outstanding useability and control resulting in less product damage.
